## GELATO MOLDS

*Artisanal gelato epitomizes*

the Italian experience and a new art form in gelato is emerging. Launched in 2013 at Sigepe, the world's largest gelato show in Rimini, Italy, Gelato Molds take gelato pans from visually appealing to stunning. PreGel's new silicon gelato molds bring forth a dynamic element for display cases. The molds are new tools that help attract customers, build unique gelato cakes and showcase the next level of gelato mastery.

### Our Selection of GELATO MOLDS

190000 Pino Pinguino®  
Penguin Mold

190200 Porcupine  
Mold

190300 Turtle  
Mold

190400 Baby  
Dinosaur Mold

190500 Gerber Daisy  
Flower Mold

190600 Spring  
Cake Mold

190700 Rose  
Leaf Mold

# A Glimpse at the Process for CREATING GELATO MOLDS

---

## Rose Leaves:

The easiest of all the molds to use, the Rose Leaves require one flavor of gelato that is piped into the mold. The excess gelato is removed with an offset spatula and then the mold is placed in the blast freezer. Once firm, the rose leaves are removed from the mold and used to decorate any gelato pan.

## Gerber Daisies:

Dainty and delicate, the Gerber Daisy Flower Mold provides various flower sizes for decorating. The execution is slightly more tedious than the leaves, requiring that the center of the flower be piped and frozen first. Once firm, the mold is removed from the blast freezer and gelato is piped into the petals of the mold. Once the petals are firm after freezing, the Gerber Daisies are ready to be removed and added to gelato.

## Turtle:

The more complex of PreGel's Gelato Molds, the Turtle requires multiple layers of gelato piped one at a time, then placed in the blast freezer after each layer. The multiple layers and intermitted blast freezing requires dedicated time, but the outcome creates an eye-catching display for adults and children alike that's well worth the commitment.
